Preface	IX
1. Biofuels: Classification, Generations and Feedstocks/ Techniques for Biofuels Generation	1
<i>Naman Arora and Vikas Mittal</i>	
1.1 Introduction	1
1.2 Classification of Biofuels	2
1.2.1 First-generation Biofuels	2
1.2.2 Second-generation Biofuels	3
1.2.3 Third-generation Biofuels	4
1.3 Types of Liquid Biofuels	6
1.3.1 Biodiesel	6
1.3.2 Bioethanol	7
1.3.3 Butanol	8
1.4 Processes Involved for the Generation of Biodiesel	9
1.4.1 Alkali Catalytic Transesterification	10
1.4.2 Acid Catalytic Transesterification	10
1.4.3 Biocatalytic Transesterification	11
1.4.4 Non-catalytic Techniques	11
1.5 Different Feedstocks and Techniques for Producing Biofuels	13
1.6 Conclusions	22
References	22
2. Selective Hydrogenation of Furfural and Levulinic Acid to Biofuels	33
<i>Zixiao Yi, Ruiqi Li, Kai Yan, Rongliang Qiu, Shu Wang and Huixia Luo</i>	
2.1 Introduction	33
2.2 Catalytic Upgrading of Furfural to Classic Fuels	37
2.2.1 Synthesis of MF and MTHF	37
2.2.2 THFA	41
2.2.3 Tetrahydrofuran (THF)	43
2.3 Conversion of Levulinic Acid to Typical Fuels	43
2.3.1 γ -Valerolactone	43
2.3.2 2-Methyltetrahydrofuran	46

2.3.3	Levulinate Esters	49
2.4	Future Outlook	49
	References	51
3.	Biosynthetic Pathway for Production of Renewable Biofuels	63
	<i>Happy Panchasara, Shreya Patel, Nisarg Gohil and Vijai Singh</i>	
3.1	Introduction	63
3.2	Natural Microbial Production of Butanol	66
3.3	Production of Butanol in Heterologous Hosts	72
3.4	Butanol Production via Yeast	77
3.5	Butanol Production using Microalgae and Cyanobacteria	78
3.6	Conclusion and Future Remarks	81
	References	82
4.	Biofuels Production using Supercritical Water Gasification of Biomass	87
	<i>Sanjeet Mehariya, Angela Iovine, Patrizia Casella, Tiziana Marino, Simeone Chianese and Antonio Molino</i>	
4.1	Introduction	87
4.2	Supercritical Water Gasification of Biomass Components	91
4.2.1	Cellulose and Hemicellulose	92
4.2.2	Lignin	93
4.2.3	Proteins and Lipids	94
4.3	Role of Operating Conditions	95
4.3.1	Role of Catalysts	95
4.3.2	Effect of Temperature	98
4.3.3	Effect of Pressure	101
4.3.4	Effect of Feed Concentration	101
4.3.5	Effect of Reactor Design, Geometry and Reactor Material	102
4.4	Technical Challenges and Future Recommendations	104
4.5	Conclusions	105
	References	106

5. Production of Biodiesel from Green Microalgae	117
<i>Samuel Kofi Tulashie</i>	
5.1 Introduction	117
5.2 Materials and Methods	119
5.2.1 Materials and Equipment	119
5.2.2 Sampling and Sample Preparation	119
5.2.3 Identification of Algae	131
5.2.4 Lipid Extraction Using Hexane as Solvent	132
5.3 Results and Discussion	133
5.3.1 Batch Reactor Case Study	133
5.3.2 Soxhlet Extraction of Oil from Algae	136
5.3.3 Commercialization of Algal Biofuel Production	138
5.3.4 Technology Transfer of the Batch Reactor Case Study into CSTR System	144
5.4 Conclusions	144
References	145
6. Advancements in the Commercialization of Lignocellulosic Bioethanol	151
<i>Saumita Banerjee, Sandeep Mudliar and Ramkrishna Sen</i>	
6.1 Introduction	151
6.2 Notable Large-scale or Near-commercial Technologies for Lignocellulosic Bioethanol Production	152
6.2.1 Mineral Acid Based Biomass Hydrolysis and Microbial Fermentation	152
6.2.2 Thermo-chemical Pre-treatment of Biomass, Enzyme Hydrolysis and Microbial Fermentation	153
6.2.3 Biomass Fractionation, Enzyme Hydrolysis and Microbial Fermentation	155
6.3 Conclusions/Outlook	156
References	157
