|--|-----------|
| Preface  | XI        |
| <b>1. PP/GO Nanocomposites with Amine Functionalized PE-g-MA Compatibilizer</b>  | <b>1</b>  |
| <i>Haleema Saleem, M. R. Vengatesan and Vikas Mittal</i>   |           |
| 1.1 Introduction   | 1         |
| 1.2 Experimental   | 4         |
| 1.2.1 Materials  | 4         |
| 1.2.2 Generation of PE-alt-DA6   | 5         |
| 1.2.3 Generation of Compatibilizer/Filler Hybrid   | 5         |
| 1.2.4 Preparation of Nanocomposites  | 5         |
| 1.2.5 Characterization   | 6         |
| 1.3 Results and Discussion   | 7         |
| 1.4 Conclusion   | 19        |
| References   | 20        |
| <b>2. Polypropylene-Sepiolite/Graphene Hybrid Composites: Thermal, Mechanical and Morphological Properties</b>                         | <b>27</b> |
| <i>S. Singh, M. R. Vengatesan, Sevim Isci and Vikas Mittal</i>   |           |
| 2.1 Introduction   | 27        |
| 2.2 Experimental   | 29        |
| 2.2.1 Materials  | 29        |
| 2.2.2 Surface Modification of Sepiolite  | 29        |
| 2.2.3 Preparation of Amine Functionalized Polypropylene (PP-g-DA8) Compatibilizer  | 30        |
| 2.2.4 Generation of PP Nanocomposites  | 30        |
| 2.2.5 Characterization   | 30        |
| 2.3 Results and Discussion   | 32        |
| 2.4 Conclusions  | 41        |
| References   | 42        |
| <b>3. Polypropylene/Cyclohexylethylene-co-Ethylene Blends and Polypropylene/Cyclohexylethylene-co-Ethylene/Graphene Nanocomposites</b> | <b>47</b> |

*Anish M. Varghese and Vikas Mittal*

|           |   |            |
|-----------|---|------------|
| 3.1       | Introduction  | 47         |
| 3.2       | Experimental  | 49         |
| 3.2.1     | Materials   | 49         |
| 3.2.2     | Preparation of PP/CHEE Blends                           | 49         |
| 3.2.3     | Preparation of PP/CHEE/Graphene<br>Nanocomposites       | 50         |
| 3.2.4     | Characterization of Blends and<br>Nanocomposites        | 50         |
| 3.3       | Results and Discussion                                  | 52         |
| 3.4       | Conclusions   | 66         |
|           | References  | 68         |
| <b>4.</b> | <b>Polymers and Composites for Optical Applications</b> | <b>75</b>  |
|           | <i>Liyamol Jacob and Vikas Mittal</i>                   |            |
| 4.1       | Introduction  | 75         |
| 4.2       | Terms Related to the Optical Properties of<br>Polymers  | 75         |
| 4.3       | High Refractive Index Polymers (HRIPs)                  | 76         |
| 4.3.1     | Sulfur Containing HRIPs                                 | 77         |
| 4.3.2     | Phosphorus Containing HRIPs                             | 79         |
| 4.3.3     | Halogen Containing HRIPs                                | 81         |
| 4.3.4     | Silicon Containing HRIPs                                | 82         |
| 4.3.5     | Other Nanocomposite HRIPs                               | 83         |
| 4.4       | Non-linear Optical Polymers                             | 86         |
| 4.4.1     | Poly(alkyl vinyl ether)s                                | 86         |
| 4.4.2     | Polystyrenes (PS)                                       | 87         |
| 4.4.3     | Polymethacrylates                                       | 88         |
| 4.4.4     | Other Non-linear Optical Polymers                       | 90         |
| 4.5       | Conclusions   | 91         |
|           | References  | 91         |
| <b>5.</b> | <b>Polymeric Self-sensing Materials</b>                 | <b>101</b> |
|           | <i>Haleema Saleem and Vikas Mittal</i>                  |            |
| 5.1       | Introduction  | 101        |
| 5.2       | Self-sensing in Different Polymeric Systems             | 104        |
| 5.2.1     | CFs/Polymer Structural Composites                       | 104        |
| 5.2.2     | CNTs/Polymer Composites                                 | 109        |

|           |  |            |
|-----------|--|------------|
| 5.2.3     | CNTs Composites based on Piezoelectric Polymers      | 114        |
| 5.2.4     | GFs Reinforced Polymer Composites                    | 115        |
| 5.2.5     | Nickel Nanowires/Polymer Composites                  | 117        |
| 5.2.6     | Ionic Polymer Actuators                              | 118        |
| 5.2.7     | Dielectric Elastomer Actuators                       | 119        |
| 5.2.8     | Graphene Aerogel Elastomers                          | 121        |
| 5.2.9     | Tetrapod Quantum Dots/Polymer Composites             | 122        |
| 5.2.10    | Zinc <sup>II</sup> /Polyiminofluorenes System        | 124        |
| 5.3       | Summary  | 125        |
|           | References   | 125        |
| <b>6.</b> | <b>Advances in Flame Retardant Polymers</b>          | <b>133</b> |
|           | <i>Dipak K. Setua</i>                                |            |
| 6.1       | Introduction   | 133        |
| 6.1.1     | Fire Determining Parameters                          | 133        |
| 6.1.2     | Course of Fire                                       | 134        |
| 6.2       | Mechanism of Flame Retardation                       | 139        |
| 6.3       | Flame Retardant Strategies                           | 140        |
| 6.3.1     | Solid State Chemistry                                | 141        |
| 6.3.2     | Thermal Barrier                                      | 141        |
| 6.3.3     | Thermal Sinks  | 141        |
| 6.3.4     | Vapor-phase Chemistry                                | 142        |
| 6.3.5     | Smoldering   | 143        |
| 6.4       | Flame Retardant Additives                            | 143        |
| 6.4.1     | Antimony Compounds                                   | 143        |
| 6.4.2     | Alumina Trihydrate                                   | 144        |
| 6.4.3     | Antimony-Halogen Synergism                           | 145        |
| 6.4.4     | Boron Compounds                                      | 146        |
| 6.4.5     | Magnesium Hydroxide                                  | 146        |
| 6.4.6     | Molybdenum Compounds                                 | 146        |
| 6.4.7     | Tin Compounds  | 147        |
| 6.4.8     | Organic Flame Retardant Additives                    | 147        |
| 6.5       | Flammability of Elastomers                           | 151        |
| 6.5.1     | Flame-retardant Rubber Coated Textiles: A Case Study | 153        |
| 6.6       | Flame Retardancy of Other Polymeric Materials        | 158        |

|           |   |            |
|-----------|---|------------|
| 6.7       | Flame Retardant Polymer Nanocomposites  | 160        |
| 6.8       | Flammability Testing  | 163        |
| 6.8.1     | Material Tests  | 164        |
| 6.8.2     | Product Tests   | 167        |
| 6.9       | Summary and Conclusions   | 169        |
|           | References  | 172        |
| <b>7.</b> | <b>Effect of Amine Functionalized Reduced Graphene Oxide on the Thermal, Mechanical, Rheological and Electrical Properties of CPE Compatibilized HDPE</b> | <b>179</b> |
|           | <i>M. R. Vengatesan, H. Y. Al Asafen, A. M. Varghese and V. Mittal</i>  |            |
| 7.1       | Introduction  | 179        |
| 7.2       | Experimental  | 180        |
| 7.2.1     | Materials   | 180        |
| 7.2.2     | Preparation of Amine Functionalized Reduced Graphene Oxide  | 180        |
| 7.2.3     | Nanocomposite Preparation   | 181        |
| 7.2.4     | Characterization Techniques   | 181        |
| 7.3       | Results and Discussion  | 183        |
| 7.4       | Conclusions   | 191        |
|           | References  | 192        |
| <b>8.</b> | <b>Liquid Crystalline Polymer Composites</b>  | <b>197</b> |
|           | <i>Liyamol Jacob and Vikas Mittal</i>   |            |
