1 MATRICES AND DETERMINANTS

1

1	Matrix	1
2	Some special matrices	1
	2.1. Null matrices	1
	2.2. Diagonal matrix	2
	2.3. Scalar matrix	2
	2.4. Identity matrix	2
	2.5. Triangular matrices	3
	2.6. Equal matrices	3
	2.7. Transpose matrix	3
	2.8. Symmetric matrix	3
	2.9. Skew symmetric matrix	4
	2.10. Singular matrix	4
	2.11. Non-singular matrix	4
	2.12. Row matrix	4
	2.13. Column matrix	4
	2.14. Nilpotent matrix	5
	2.15. Idempotent matrix	5
	2.16. Orthogonal matrix	6
	2.17. Similar matrices	6
	2.18. Conjugate matrix	6
	2.19. Hermitian matrix	6
	2.20. Skew-Hermitian matrix	6
	2.21. Unitary matrix	7
	2.22. Echelon form	7
	2.23. Jordon canonical form	7
3	Addition of two (or more) matrices	7
4	Multiplication of a matrix by a scalar	8
5	Multiplication of matrices	9
6	Determinant	10
7	Some properties of determinants	12
8	Elementary operations on matrices	13
	8.1. Comparative features	15
9	Rank of matrix	22
	9.1. Rank of some special matrices	23
10	Inverse of a non-singular matrix	24
	10.1. Orthogonal matrix	29
11	Linear equations. Cramer's rule	30

12	Homogeneous linear equations	35
13	Characteristic equation of a matrix	36
14	Minimal polynomial	41
15	Similar matrices and diagonalization of a matrix	43
16	Problem set	46
2	LIMIT OF A FUNCTION	55
1	Introduction	55
2	Some properties of limits	58
3	Some important limits	60
	3.1. Properties of $f(x) = (1 + 1/x)^x$	62
4	Problem set	63
3	CONTINUITY OF A FUNCTION	67
1	Introduction	67
2	Some properties of continuous functions	69
3	One-sided continuity	71
4	Problem set	75
4	DIFFERENTIATION	79
1	Differentiation of functions	79
2	Continuity of a differentiable function	81
3	Derivatives of some standard functions	84
	3.1. Algebraic functions	84
	3.2. Exponential and logarithmic functions	85
	3.3. Trigonometric functions	87
	3.4. Hyperbolic functions	88
4	Chain rule (<i>methods of substitution</i>)	89
	4.1. Logarithmic differentiation	89
5	Derivation of inverse trigonometric functions	93
6	Implicit functions and their derivation	95
7	Problem set	96
5	SUCCESSIVE DIFFERENTIATION	101
1	Introduction	101
2	Leibnitz theorem	103
3	Some more difficult cases	105

6	APPLICATIONS OF DERIVATIVES	107
1	Maxima / minima of a function on a closed interval	107
	1.1. Extrema at the end points of interval	107
	1.2. Local maxima / minima of a function	108
2	Derivative of $f(x)$ at local extremum points	109
3	Monotonic functions	116
4	Application of differentiation to calculate rate of change	119
5	Problem set	123
7	MAXIMA AND MINIMA OF A FUNCTION	127
	<i>(CONTINUED)</i>	
1	Points of local extrema	127
2	Second derivative test for local extrema	129
3	Some miscellaneous examples	132
4	Problem Set	136
8	PARTIAL DIFFERENTIATION	143
1	Partial differentiation of scalar functions	143
2	Total derivative of a function	146
3	Euler's theorem on homogeneous functions	148
4	Problem Set	154
9	SERIES AND EXPANSION OF FUNCTIONS	163
1	Power series	163
	1.1. Interval of convergence of a power series	163
2	Maclaurin's series	164
3	Taylor's series	167
10	ENVELOPES, INVOLUTES AND EVOLUTES	171
1	Envelope of family of curves	171
	1.1. One-parameter family of curves	171
	1.2. Envelope of family of curves involving two parameters	174
	1.3. General method for more than one parameter	174
	1.4. Envelope in polar coordinates	176
2	Involutives and evolutes	178

3	Problem set	182
11	INTEGRATION OF FUNCTIONS	191
1	Introduction	191
2	Indefinite integrals of some standard functions	191
3	Different methods of integration	197
	3.1. Substitution method	197
	3.2. $\int \{1/(ax^2 + bx + c)\} dx$	197
	3.3. $\int \{(px + q)/(ax^2 + bx + c)\} dx$	198
	3.4. Some reduction formulae	199
4	Definite integrals	200
5	Some theorems on definite integrals	204
6	Problem set	208
12	APPLICATIONS OF INTEGRATION	211
1	Area	211
2	Displacement	214
3	Work done by a force	214
4	Volume of solids of revolution	215
5	Problem set	216
13	CONTINUOUS FUNCTIONS OF TWO VARIABLES	219
1	Functions of two variables	210
2	Integral $\int_a^b \{\partial g(x, y)/\partial x\} \cdot dx$	223
3	Inversion (change) of the order of integration	224
14	APPLICATIONS OF VECTORS TO GEOMETRY	227
1	Preliminaries	227
2	Distance between two points	229
3	Direction cosines of a line	231
4	Equation to a straight line	234
5	Equation to a plane	237
6	Problem set	241
15	DIFFERENTIATION OF VECTOR FUNCTIONS	245
1	Vector functions of a single parameter and their derivation	245

2	Partial differentiation of vector functions	250
	2.1. Normal to a surface	251
3	Divergence of a vector	256
4	Curl of a vector	258
5	Some identities	259
6	Second order derivation of vectors	268
	6.1. <i>Laplace</i> equation	268
7	Problem set	272
16	INTEGRATION OF VECTOR FUNCTIONS	277
1	Introduction	277
2	Gauss divergence theorem	281
	2.1. Implications of Gauss divergence theorem	282
3	Green's Theorem	284
4	Stoke's Theorem	285
	4.1. Linear element of a curve	285
	4.2. Curvilinear coordinates of a point on a surface	286
	4.3. Fundamental magnitudes of first order	286
5	Deductions from Stoke's theorem	289
6	Problem set	291
	BIBLIOGRAPHY	295
	INDEX	297
