Preface	IX
1. Thermally Phase Changing Materials: Synthesis, Properties and Applications	1
<i>Liyamol Jacob and Vikas Mittal</i>	
1.1 Introduction	1
1.2 Different Phase Change Materials (PCMs)	2
1.2.1 Nanomaterial PCMs	2
1.2.2 Carbon PCMs	3
1.2.3 Metal Foam PCMs	6
1.3 Classification of PCMs Based on Morphology	7
1.3.1 Fibrous Structure	8
1.3.2 Porous Structure	9
1.4 Applications of PCMs	10
1.4.1 Energy Storage	10
1.4.2 Smart Buildings	11
1.4.3 Textile Applications	12
1.5 Conclusions	13
References	14
2. Phase Change Materials for Solar Energy Applications	21
<i>Hoda Akbari, David G Peña, Rebeca S Pizarro, Hind Ahmed, Maria C. Browne, Chuka O'koli, Edward Guionneau, Ming Jun Huang and Sarah J. McCormack</i>	
2.1 Introduction	21
2.2 Phase Change Materials	23
2.3 The Use of PCMs for Solar Energy Applications	27
2.3.1 Solar Thermal Energy for Building and Industry	28
2.3.2 Concentrating Solar Power (CSP) Plants	31
2.3.3 PCM in Photovoltaic (PV) and Hybrid Solar Energy (PV/T)	34
2.4 Corrosion	39
2.4.1 Inorganic Compounds	39
2.4.2 Organic Compounds	45
2.5 Conclusion	48

References	49
3. A Brief Introduction and Review of Shape Stabilized Composite Phase Change Materials (SSCPCM)	55
<i>Xu Qiao, Xiangfei Kong, Lu Wang and Chang Xi</i>	
3.1 Background	55
3.2 Composite Phase Change Materials (CPCMs)	56
3.2.1 An Overview of PCMs	56
3.2.2 Support Materials	60
3.2.3 PCMs	65
3.3 Enhancement of Thermal Conductivity of PCMs	71
3.3.1 Aluminum Powder	73
3.3.2 Copper Powder	74
3.3.3 Expanded Graphite (EG)	74
3.3.4 Carbon Nanotubes	75
3.3.5 Graphene Wafers	76
3.4 Preparation of CPCMs	77
3.4.1 Sol-gel Method	77
3.4.2 Infiltration Method	78
3.4.3 Vacuum Infiltration Method	79
3.4.4 Drum Rotating Infiltration Method	80
3.5 Properties	80
3.5.1 Thermal Properties	80
3.5.2 Morphology	81
3.5.3 Physical Stability	83
3.5.4 Chemical Stability	83
3.5.5 Adsorption Properties	84
3.6 Properties of SSCPCMWs	85
3.7 Properties of Buildings Incorporated with SSCPCMWs	86
3.8 Conclusions	86
References	87
4. Nanofluid and Phase Change Material Integrated into a Photovoltaic Thermal System	93
<i>Mohammad Hosseinzadeh, Mohammad Sardarabadi and Mohammad Passandideh-Fard</i>	
4.1 Introduction	93

4.2	Thermodynamic Analysis	95
4.2.1	Energy Analysis	95
4.2.2	Exergy Analysis	99
4.3	Nanofluid-based PVT Systems	101
4.3.1	Thermophysical Properties of Nanofluids	102
4.3.2	Mass/volume Fraction of Nanoparticles	103
4.3.3	Flow Regime	107
4.3.4	Base Fluids	109
4.3.5	Particle Size	110
4.4	PCM-based PVT Systems	110
4.4.1	PVT/PCM Systems	111
4.4.2	PVT Systems with MEPCM Slurry	116
4.5	Conclusions	118
	References	119
5.	Inorganic Phase Change Materials: A Review	129
	<i>Gigi George</i>	
5.1	Introduction	129
5.2	Properties and Performance	130
5.3	Service Life Enhancement of PCMs	135
5.4	Thermal Conductivity Enhancement of PCMs	136
5.5	Conclusions	137
	References	138
6.	Attapulgite Based Composite Phase Change Material for Solar Thermal Energy Storage	141
	<i>Ahmet Sari, Alper Biçer, Mohammed Ouikhalfan and Gökhan Hekimoğlu</i>	
6.1	Introduction	141
6.1.1	Thermal Energy Storage	142
6.1.2	Phase Change Materials	142
6.2	Thermally Energy-efficient Construction Materials	144
6.2.1	Incorporation of PCM into Concrete	145
6.2.2	Overview of Clay-based Composite PCMs	145
6.3	Experimental	152
6.3.1	Materials	152

6.3.2	Preparation of Fatty Acid Eutectic Mixture (EM)	153
6.3.3	Preparation of Attapulgite/PA-SA as FS-CPCM	153
6.3.4	Characterization of Attapulgite/PA-SA as FS-CPCM	154
6.4	Results and Discussion	157
6.4.1	Physico-chemical Properties	157
6.4.2	LHTES Characteristics of FS-CPCM	164
6.5	Conclusions	168
	References	170

Index**179**
