CONTENTS

PREFACE **ix**

1 VECTOR ALGEBRA **1**

1 Physical quantities 1
1.1 Addition of vectors 1
2 Scalar multiplication of a vector 3
3 Components of a vector along the coordinate axes 4
4 Products of Vectors 6
4.1 Dot product of two vectors 6
4.2 Cross product of two vectors 9
5 Products of three vectors 12
5.1 Properties of $[\mathbf{a}\ \mathbf{b}\ \mathbf{c}]$ 13
5.2 Properties of $(\mathbf{a} \times \mathbf{b}) \times \mathbf{c}$ 14
6 Products of four vectors 15
7 Reciprocal systems of vectors 17
8 Vector equations 21
9 Problem set 23

2 VECTOR CALCULUS (DERIVATION) **27**

1 Vector functions of a single parameter and their derivation 27
2 Partial derivation of vector functions 32
2.1 Normal to a surface 33
3 Divergence of a vector 38
4 Curl of a vector 40
5 Some identities 42
6 Second order derivation of vectors 51
6.1 *Laplace* equation 51

3 VECTORS IN ELECTRIC AND MAGNETIC FIELDS **55**

1 Electric field 55
1.1 Multiple charges 56
1.2 Continuous distribution of charge 56
2 Magnetic field 57

4 TENSORS (CARTESIAN) **59**

1 Coordinate system in a V_n 59
2 Scalars 60
3 Einstein's summation convention 61
4 Contravariant vector 61
5 Covariant vector 62
6 Contravariant tensor of order two 63
7 Contravariant tensor of r^{th} order 64
8 Covariant tensor of order two 64
9 Covariant tensor of s^{th} order 66
10 Mixed tensor of type (1, 1) 66
11 Mixed tensor of type (r, s) 68
12 Some concluding remarks 69
13 Some algebraic laws of tensors 70
14 Operations of contraction and transvection 72
15 Symmetric and skew-symmetric tensors 77
16 Relative tensors 81
17 Problem set 82

5 TENSORS IN CYLINDRICAL AND SPHERICAL COORDINATES 87

1 Orthogonal curvilinear coordinates 87
2 ∇ operator in orthogonal curvilinear coordinates 90
3 Cylindrical coordinates 92
4 ∇ operator in cylindrical coordinates 97
5 Spherical polar coordinates 99
6 ∇ operator in (r, θ, φ) 106

6 THEORY OF RELATIVITY 109

1 Theory of relativity 109
1.1 Lorentz transformation 110

BIBLIOGRAPHY 111
