CONTENTS

PREFACE **xv**

1 PRELIMINARIES **1**

1 An algebraic field 1
2 Definite integrals 1
2.1. Beta and Gamma functions 2
3 Linearly dependent and independent vectors 2
4 Taylor's theorem 4

2 STATICS **7**

1 Resultant of 2 forces acting at a point 7
2 Resolution of a force 9
3 Moment of a force about a point 11
4 Moment of a force about a line 12
5 Couple of forces 14
6 Equilibrium of three forces acting at a point 15
7 Equilibrium of forces acting at a rigid body 17
8 Equilibrium of a rigid body 18
8.1. Two forces in equilibrium 18
8.2. Parallel forces in equilibrium 18
8.3. Three forces in equilibrium 19
9 Types of forces 20
9.1. Weight 20
9.2. Normal reaction 20
9.3. Friction 21
9.4. Tension 22
9.5. Thrust in a light rod 22
10 Particle on a rough inclined plane 25
11 Tension in an elastic string 28
12 Centre of gravity of system of *n* particles 29
13 Centre of gravity of a uniform sheet 31
13.1. Uniform beam 31
13.2. Uniform lamina (square / rectangular) 31
13.3. Uniform triangular lamina 31
14 Work done by a force 34
15 Power 36

3 STATISTICS (ELEMENTARY) 39

1 Introduction 39
2 Measures of central of tendency 39
2.1. Mean 39
2.2. Median 40
2.3. Mode 40
3 Moment 41
3.1. Moment about origin 41
3.2. Moment about mean value 42
3.3. Moment about any value 43
3.4. Change of origin and unit 43
3.5. Moment of a grouped frequency distribution 45
4 Moment generating function 45
4.1. Continuous distribution 45
4.2. Ungrouped distribution 46
5 Skewness 47
5.1. Coefficient of skewness 47
6 Kurtosis 48
6.1. Measure of kurtosis 48
7 Correlation and regression 50
7.1. Coefficient of correlation 52
8 Polynomial regression 52
9 Theoretical distributions 55
9.1. Binomial distribution 56
9.2. Poisson distribution 59
9.3. Normal distribution 61
9.4. Relative frequency function of normal 63

4 TESTS OF SIGNIFICANCE 67

1 Introduction 67
1.1. Null hypothesis 67
1.2. Pearson's Chi-square statistic 68
2 Conditions for validity of chi-square test 69
2.1. Applications of chi-square distribution 70
3 Student's *t*-test 73
3.1. Assumptions for Student's *t*-test 74
3.2. Applications of *t*-distribution 75
4 Fisher's *t*-test 76

5 TENSORS (CARTESIAN) 77

1 Coordinate system in a V_n 77
2 Scalars 78
3 Einstein's summation convention 79
4 Contravariant vector 79
5 Covariant vector 80
6 Contravariant tensor of order two 81
7 Contravariant tensor of r^{th} order 82
8 Covariant tensor of order two 82
9 Covariant tensor of s^{th} order 84
10 Mixed tensor of type (1, 1) 84
11 Mixed tensor of type (r, s) 85
12 Some concluding remarks 87
13 Some algebraic laws of tensors 87
14 Operations of contraction and transvection 89
15 Symmetric and skew-symmetric tensors 95
16 Relative tensors 99
17 Problem set 100

6 TENSORS IN CYLINDRICAL AND SPHERICAL COORDINATES 105

1 Orthogonal curvilinear coordinates 105
2 ∇ operator in orthogonal curvilinear coordinates 108
3 Cylindrical coordinates 110
4 ∇ operator in cylindrical coordinates 115
5 Spherical polar coordinates 117
6 ∇ operator in (r, θ, φ) 124

7 THEORY OF EQUATIONS 127

1 Linear equation 127
1.1. In one variable 127
1.2. In two variables 127
1.3. In three variables 127
2 Quadratic equation 127
2.1. In one variable 127
2.2. In two variables 128
2.3. In three variables 128
3 Dimension of a path 129
4 An n^{th} degree equation in one variable 129

5 Homogeneous equations 130
5.1. Homogeneous linear equations 130
5.2. Homogeneous quadratic equations 130

8 TOPOLOGY 131

1 Introduction 131
2 Some basic concepts in topological spaces 133
2.1. Open and closed sets 133
2.2. Closure of a set 134
2.3. Neighbourhood of a point in a topological space 135
2.4. Isolated and limit points of a set 136
2.5. Perfect set 137
2.6. Interior and boundary of a set 137
2.7. Open bases and open sub-bases of a topological space 138
2.8. Open and continuous mappings 138
2.9. Topological property 139
3 Some special types of topological spaces 140
3.1. Metrizable space 140
3.2. Relative topology and subspaces of a topological space 140
3.3. T_1 - space and Hausdorff space 140
3.4. First countable space 141
3.5. Second countable space 141
3.6. Separable space 142
3.7. Compact (topological) space 142
3.8. Locally compact (topological) space 142
3.9. Countably compact space 143
3.10. Product topological space 143
3.11. Completely regular spaces 143
3.12. Normal space 143
3.13. Connected (topological) spaces 144
3.14. Totally disconnected spaces 145
3.15. Locally connected spaces 146
3.16. Locally compact Hausdorff spaces 146
4 Urysohn's lemma and Tietze extension theorem 146
5 Continuous curve 147
6 Fixed point space 147

9 TRIGONOMETRY (PLAIN) 149

1 Angle 149
1.1. Degrees 149
1.2. Radians 149
2 (Circular) trigonometric functions 149
3 Angle in first quadrant 150
4 Angle in second quadrant 151
4.1. In terms of $90°+\theta$ 151
4.2. In terms of $\pi-\theta$ 151
5 Angle in third quadrant 151
6 Angle in fourth quadrant 152
7 Angle in terms of $2\pi+\theta$ 152
8 Summary of Results in §§ 3 – 7 153
8.1. Acute angle 153
8.2. *Sines* and *cosines* in different quadrants 153
9 Trigonometric functions of some important angles 154
10 Sum / difference of angles 154
11 Sum and difference of *sines* and *cosines* of two angles 156
11.1. $\sin\alpha\pm\sin\beta$ 156
11.2. $\cos\alpha\pm\cos\beta$ 156
11.3. $\sin(A+B)\pm\sin(A-B)$ and $\cos(A+B)\pm\cos(A-B)$ 156
12 Sine and cosine rules for a triangle 156
13 Inverse (circular) trigonometric functions 157
14 Euler's theorem 157
15 Hyperbolic functions 158
15.1. Properties of hyperbolic functions 158
16 Inverse hyperbolic functions 159
17 Expansion of trigonometric functions 160
18 Solutions of trigonometric equations 161
19 Some important limits 161
20 Problem set 161

10 VECTOR ALGEBRA 163

1 Physical quantities 163
1.1. Addition of vectors 163
2 Scalar multiplication of a vector 165
3 Components of a vector along the coordinate axes 166
4 Products of Vectors 168

	4.1. Dot product of two vectors	168
	4.2. Cross product of two vectors	171
5	Products of three vectors	174
	5.1. Properties of [a b c]	175
	5.2. Properties of $(a \times b) \times c$	176
6	Products of four vectors	177
7	Reciprocal systems of vectors	179
8	Vector equations	183
9	Problem set	185

11 VECTORS IN GEOMETRY 189

1	Distance between two points	189
2	Direction cosines of a line	191
3	Equation to a straight line	194
4	Equation to a plane	197

12 VECTOR CALCULUS (DERIVATION) 201

1	Vector functions of a single parameter and their derivation	201
2	Partial derivation of vector functions	206
	2.1. Normal to a surface	207
3	Divergence of a Vector	212
4	Curl of a vector	214
5	Some Identities	216
6	Second order derivation of vectors	225
	6.1. *Laplace* equation	225

13 VECTOR CALCULUS (INTEGRATION) 229

1	Introduction	229
2	Gauss divergence theorem	233
	2.1. Implications of Gauss divergence theorem	234
3	Green's theorem	236
4	Stoke's theorem	237
	4.1. Linear element of a curve	237
	4.2. Curvilinear coordinates of a point	238
	4.3. Fundamental magnitudes of first order	238
5	Deductions from Stoke's theorem	241

14 VECTOR SPACES 245

1 Introduction 245
2 Some properties of linear spaces 247
3 Linear combination of vectors 249
4 Decomposition of a linear space into subspaces 251
5 Isomorphism of linear spaces 252
6 Linear transformations 254
7 Some particular cases of S (T) 258
8 Algebras 263
8.1. Sub-algebra 264
8.2. Ideal in an *algebra* and quotient *algebra* 264
9 Normed linear space 264
10 Banach space 265

BIBLIOGRAPHY 267
