## Preface

## Author

<b>Chapter 1</b>	<b>Introduction to Equilibrium Stage Operations</b>	<b>1</b>
1.1	Learning Outcomes	1
1.2	Introduction	1
1.3	Concept of an Equilibrium Stage	4
1.3.1	Distillation	4
1.3.2	Absorption	5
1.3.3	Stripping	6
1.3.4	Liquid-liquid Extraction	7
1.3.5	Leaching	8
1.4	Examples of Industrial Applications of Equilibrium Staged Separation Processes	10
1.4.1	Dehydration of Natural Gas	10
1.4.2	CO <sub>2</sub> Capture and Storage	10
1.4.3	Vegetable Oil Extraction	11
1.4.4	Production of Penicillin Antibiotic	12
1.5	Multi-Stage Contacting of Two Phases	14
1.6	Equilibrium between Phases	16
1.6.1	Definition and Criteria for Phase Equilibrium	16
1.6.2	Relationship between the Compositions of Different Phases at Equilibrium	16
1.6.3	Non-ideal Liquid Solutions	19
1.6.4	Limiting Cases of Non-ideal Solutions	22
	Notation	24
	Tutorial Problems with Solution	24
	Short Review Questions	26
	Practice Problems	27
	Further Reading	27
<b>Chapter 2</b>	<b>Single-Stage Gas Absorption</b>	<b>29</b>
2.1	Learning Outcomes	29
2.2	Introduction	29
2.3	Driving Force for Mass Transfer in Gas Absorption	30
2.4	Analysis of Single-Stage Gas Absorption: Dilute Systems	31
2.5	Analysis of Single-Stage Gas Absorption: Concentrated Systems	35
	Notation	38

Tutorial Problems with Solution	39
Short Review Questions	44
Practice Problems	45
<b>Chapter 3 Single-Stage Liquid Stripping</b>	<b>47</b>
3.1 Learning Outcomes	47
3.2 Introduction	47
3.3 Driving Force for Mass Transfer in Liquid Stripping	48
3.4 Analysis of Single-Stage Liquid Stripping: Dilute Systems	49
3.5 Analysis of Single-Stage Liquid Stripping: Concentrated Systems	52
Notation	54
Tutorial Problems with Solution	55
Short Review Questions	58
Practice Problems	58
<b>Chapter 4 Multi-Stage Gas Absorption</b>	<b>59</b>
4.1 Learning Outcomes	59
4.2 Introduction	59
4.3 Analysis of Counter-current Multi-Stage Absorption Process	60
4.4 Design of Multi-Stage Absorption Towers	64
4.4.1 Graphical Approach: McCabe-Thiele Method	64
4.4.2 Analytical Approach: Kremser Equations	66
4.4.3 Minimum L/V Requirement and Pinch Condition	69
Notation	70
Tutorial Problems with Solution	71
Short Review Questions	76
Practice Problems	76
<b>Chapter 5 Multi-Stage Liquid Stripping</b>	<b>79</b>
5.1 Learning Outcomes	79
5.2 Introduction	79
5.3 Design of Multi-Stage Liquid Stripping Towers	81
5.3.1 Graphical Approach: McCabe-Thiele Method	81
5.3.2 Analytical Approach: Kremser Equations	81
5.3.3 Minimum V/L (Maximum L/V) Requirement and Pinch Condition	84
Notation	84

Tutorial Problems with Solution	85	
Short Review Questions	90	
Practice Problems	91	
<b>Chapter 6</b>	<b>Some Definitions and Basic Concepts related to Distillation</b>	
	<b>93</b>	
6.1	Learning Outcomes	93
6.2	Introduction	93
6.3	Vapor Pressure	94
	6.3.1 Clapeyron and Clausius-Clapeyron Equations	97
	6.3.2 Antoine Equation	97
6.4	Raoult's Law	97
6.5	Volatility and Relative Volatility	99
6.6	Bubble Point and Dew Point	100
	6.6.1 Definitions of Bubble and Dew Points	100
	6.6.2 Different Classes of Bubble and Dew Points Calculations	104
	6.6.3 Bubble and Dew Points Calculations Using Raoult's Law	104
	6.6.4 Bubble and Dew Points Calculations Using $K_i$ Values	107
	6.6.5 Importance of Bubble and Dew Points Calculations	109
6.7	Construction of P-x-y and T-x-y Phase Diagrams and y-x Equilibrium Curve	110
	6.7.1 Construction of Phase Diagrams and Equilibrium Curve Using Raoult's Law	110
	6.7.2 Construction of Phase Diagrams and Equilibrium Curve Using $K_i$ Values	111
		112
Notation		
Tutorial Problems with Solution		112
Short Review Questions		120
Practice Problems		120
<b>Chapter 7</b>	<b>Mass and Energy Balances for Open (Flow) Systems</b>	
	<b>123</b>	
7.1	Learning Outcomes	123
7.2	Introduction	123
7.3	Mass Balance	124
7.4	Energy Balance	126
7.5	Estimation of Enthalpy of Fluids	128
	7.5.1 Pure Single-Component Substances	128
	7.5.2 Multi-component Gas Mixtures and Liquid Solutions	130
Notation		132
Tutorial Problems with Solution		133
Short Review Questions		134

	Practice Problems	134
<b>Chapter 8</b>	<b>Single-Stage Flash Distillation</b>	<b>135</b>
8.1	Learning Outcomes	135
8.2	Introduction	135
8.3	Analysis of Binary Flash Distillation	136
8.3.1	$P, \psi$ - Flash Distillation	136
8.3.2	$P, T$ -Flash Calculation	145
8.4	Analysis of Multi-component Flash Distillation	145
	Notation	147
	Tutorial Problems with Solution	149
	Short Review Questions	153
	Practice Problems	153
<b>Chapter 9</b>	<b>Multi-Stage Column Distillation</b>	<b>155</b>
9.1	Learning Outcomes	155
9.2	Introduction	155
9.3	Continuous Single-Stage Distillation Processes	155
9.4	Cascading of Stages	158
9.5	Multi-Stage Distillation Column	162
9.6	Analysis and Design of Multi-Stage Distillation Column	165
9.6.1	External Balances	167
9.6.2	Internal Balances	169
9.6.3	McCabe-Thiele Method of Analysis and Design of Distillation Column	174
9.6.4	Special Applications of Column Distillation	194
	Notation	209
	Tutorial Problems with Solution	211
	Short Review Questions	222
	Practice Problems	223
	Appendix: The Smoker Equations	225
<b>Chapter 10</b>	<b>Approximate Analytical Method of Designing Distillation Columns</b>	<b>229</b>
10.1	Learning Outcomes	229
10.2	Introduction	229
10.3	Estimation of the Number of Stages	229
10.3.1	Fenske Equation for $N_{min}$ at total reflux	229
10.3.2	Underwood Equation for $R_{min}$	232
10.3.3	Gilliland Correlation for the Estimation of Number of Theoretical Stages	233

10.3.4	Fenske-Underwood-Gilliland (FUG) Method of Designing Distillation Columns	234
10.4	Estimation of Actual (Non-Equilibrium) Number of Stages	234
10.5	Estimation of Tray/Plate Spacing and Height of Column	238
10.6	Different Types of Trays/Plates	238
10.7	Estimation of Column Diameter	240
10.7.1	Estimation of Flooding Velocity of Vapor	243
10.7.2	Estimation of Column Diameter	245
10.8	Preliminary Mechanical Design of a Distillation Column	246
10.8.1	Selection of Material of Column Construction	246
10.8.2	Shell Thickness of Distillation Column	246
	Notation	253
	Tutorial Problems with Solution	255
	Short Review Questions	257
	Practice Problems	258
<b>Chapter 11</b>	<b>Ponchon-Savarit Graphical Method of Designing Distillation Columns</b>	<b>259</b>
11.1	Learning Outcomes	259
11.2	Introduction	259
11.3	Enthalpy-Composition Diagram for Binary Mixtures	260
11.4	Construction of Enthalpy-Composition Diagram for Binary Mixtures	261
11.4.1	Enthalpy of Liquid Solutions at Bubble Point Temperature	262
11.4.2	Enthalpy of Vapor mixtures at Dew Point Temperature	263
11.4.3	Example: Construction of Enthalpy-Composition Diagram for Benzene-Toluene System	263
11.5	Ponchon-Savarit Graphical Method of Analysis and Design of Distillation Columns	266
11.5.1	Enriching Section	267
11.5.2	Stripping Section	270
11.5.3	Feed Line	274
11.5.4	Estimation of Total Number of Stages using Ponchon-Savarit Diagram	274
11.5.5	Limiting Reflux Ratios – Total Reflux and Minimum Reflux	276
	Notation	277
	Tutorial Problems with Solution	279
	Short Review Questions	285
	Practice Problems	285
<b>Chapter 12</b>	<b>Batch Distillation – Without and With Reflux</b>	<b>289</b>
12.1	Learning Outcomes	289
12.2	Introduction	289

12.3	Analysis of Batch Distillation	290
12.4	Batch Distillation with Reflux	294
12.5	Batch Steam Distillation	297
	Notation	299
	Tutorial Problems with Solution	300
	Short Review Questions	306
	Practice Problems	306
<b>Chapter 13</b>	<b>Multicomponent Distillation</b>	<b>309</b>
13.1	Learning Outcomes	309
13.2	Introduction	309
13.3	Separation of Multicomponent Mixtures Using a Single Distillation Column	310
13.3.1	Key and Non-Key Components	310
13.3.2	Class 1 and Class 2 Separations	311
13.3.3	Approximate Methods of Designing Multicomponent Distillation Columns	312
13.3.4	Rigorous Calculation Procedure for Rating the Performance of Multicomponent Distillation Columns	318
13.4	Separation of Multicomponent Mixtures into Pure Components Using a Sequence of Distillation Columns	321
13.5	Heuristics Approach for the Development of Separation Sequence	327
	Notation	327
	Tutorial Problems with Solution	329
	Short Review Questions	337
	Practice Problems	337
<b>Chapter 14</b>	<b>Liquid-Liquid Extraction</b>	<b>339</b>
14.1	Learning Outcomes	339
14.2	Introduction	339
14.3	Triangular Phase Diagrams	340
14.3.1	Partially Miscible Solvent-Diluent Pair	340
14.3.2	Completely Immiscible Solvent-Diluent Pair	343
14.4	Single-Stage Liquid-Liquid Extraction	344
14.4.1	Analysis of a Single-Stage LLX Process: Immiscible Solvent-Diluent Pair	344
14.4.2	Analysis of a Single-Stage LLX Process: Partially Miscible Solvent-Diluent Pair	346
14.5	Multi-Stage Liquid-Liquid Extraction	348
14.5.1	Analysis of a Multi-Stage LLX Process: Immiscible Solvent-Diluent Pair	348

14.5.2	Analysis of a Multi-Stage LLX Process: Partially Miscible Solvent-Diluent Pair	351
	Notation	358
	Tutorial Problems with Solution	360
	Short Review Questions	370
	Practice Problems	370
<b>Chapter 15</b>	<b>Solid-Liquid Leaching</b>	<b>373</b>
15.1	Learning Outcomes	373
15.2	Introduction	373
15.3	Phase Diagrams for Solid-Liquid Leaching	374
15.4	Analysis of a Single-Stage Solid-Liquid Leaching Process	375
15.5	Multi-Stage Solid-Liquid Leaching	377
15.5.1	Analysis of a Multi-Stage Solid-Liquid Leaching Process	377
15.5.2	Analysis of a Multi-Stage Solid-Liquid Leaching Process with Partial Dissolution	382
	Notation	386
	Tutorial Problems with Solution	389
	Short Review Questions	394
	Practice Problems	394
<b>Chapter 16</b>	<b>Analysis and Design of Continuous Contacting Packed Columns</b>	<b>397</b>
16.1	Learning Outcomes	397
16.2	Introduction	397
16.3	Packings and Packing Materials	397
16.3.1	Random Packings	398
16.3.2	Structured Packings	399
16.3.3	Liquid Distribution	399
16.4	Height of Packed Columns	400
16.4.1	HETP Method	400
16.4.2	HTU-NTU Method	402
16.4.3	Relationship between HETP and HTU	407
16.5	Diameter of Packed Columns	408
16.5.1	Flooding in Packed Columns	409
16.5.2	Flooding Curve and its Interpretation	409
16.5.3	Estimation of Column Diameter using the Flooding Curve/Equation	413
	Notation	414
	Tutorial Problems with Solution	415

Short Review Questions	420
Practice Problems	421
