CONTENTS

PREFACE **xvii**

1. NON-EUCLIDEAN GEOMETRY AND ITS GENERALIZATIONS **1**

1. The origin of geometry 1
2. First glimpse of Non-Euclidean Geometry 1
3. The discovery of Non-Euclidean geometry 3
4. Geometry on different surfaces 5
5. The generalizations of Non-Euclidean geometry 7

2. DIFFERENTIAL GEOMETRY: ITS PAST AND FUTURE **9**

1. Introduction 9
2. Emergence of generalized metric structures 9
3. Finslerian structures 10
4. Symmetric and recurrent Finsler manifolds 11
5. Techniques and diverse approaches in differential geometry 12

3. METRICS OF CURVED SURFACES AND SPACES **13**

1. Introduction 13
2. Metric of a V_2 13
3. Non-Euclidean metric 16
4. Riemannian metric 16
5. Generalized Riemannian metric 17
6. Semi-symmetric Riemannian metric 17
7. Finsler metric 18
8. Generalized Finslerian metric 20
9. Berwald metric 20
10. Landsberg metric 20
11. Randers' metric 21
12. *C*-reducible (Finsler) metric 21
13. *P*-reducible (Finsler) metric 22
14. P_2-like (Finsler) metric 22
15. S_3-like (Finsler) metric 23
16. Kropina metric 23

17. Kawaguchi metric 23
18. Areal metric 24
19. Kähler metric 24

4. BASIC CONCEPTS OF FINSLERIAN GEOMETRY 25

1. Finsler manifold 25
2. The metric tensor 26
3. Generalized Christoffel symbols 27
4. Two processes of Rund's covariant differentiation 28
5. Euclidean connection of Cartan and his two processes of covariant derivation 30
6. Berwald's connection and his covariant derivation 33
7. Curvature tenors 35
8. Some additional commutation formulae 38
9. Various properties of curvature tensors 39
10. Bianchi identities satisfied by various curvature tensors 43
11. Special Finsler manifolds 46
    11.1 Isotropic manifolds 46

5. TRANSFORMATIONS IN FINSLER SPACE 51

1. Paths and projective connection in a Finsler space 51
    1.1 Projective connection parameters 52
2. Projective curvature tensor 55
    2.1 Properties of W^i_j 56
    2.2 Tensor W^i_{jk} 56
    2.3 Properties of projective curvature tensor 57
3. Conformal transformation 59
    3.1 Conformal change in connection parameters 61
    3.2 Conformal change in curvature tensor 62
    3.3 Conformal connection parameters 63
4. Infinitesimal transformation 65
5. Infinitesimal motion. Killing equations 66
    5.1 Applications of Killing equation 67
6. Infinitesimal translation 70
7. Infinitesimal conformal motion. Homothetic motion 70
8. Infinitesimal transformations preserving geodes- 71

ics
9. Diverse forms of generator of infinitesimal transformation 71
9.1 F_n with special concircular infinitesimal transformations 73
9.2 Concircular infinitesimal transformations (c.i.t.) in F_n 74
9.3 Special c.i.t. in F_n with $\rho_k = 0$ 75
10. Infinitesimal transformations generated by a recurrent vector field 75

6. THEORY OF LIE DERIVATIVES 77

1. Introduction 77
2. Lie derivative 77
2.1 Lie derivative of a geometric object 77
2.2 Lie derivative of a contravariant vector 78
2.3 Lie derivative of a covariant vector 79
2.4 Lie derivative of a mixed tensor 80
2.5 Lie derivative of a tensor of rank (r, s) 80
3. Lie derivative of connection parameters 82
4. Lie derivative of projective connection parameters 83
5. Motion, affine motion and projective motion 84
6. Commutation formulae involving Lie derivation 85
7. Motion 88
8. Affine motion 90
8.1 Implications of Eq. (8.1) 93
8.2 Affine motions generated by special vector fields 93
8.3 Affine motions generated by special concircular vector fields 94
9. Projective motion 94
9.1 Special concircular projective motion 96
9.2 Recurrent projective motion 98
10. Curvature collineation 99
10.1 *H-CC* 100
10.2 *H-CC* projective motion 101
10.3 Projective curvature collineation 101
11. Conformal and homothetic motions in F_n with reference to Lie derivation 103

7. SYMMETRIC AND PROJECTIVELY SYMMETRIC FINSLER SPACES **105**

1. Introduction 105
   - 1.1 Affine motion in S-F_n and PS-F_n 105
   - 1.2 Projective motions in S-F_n and PS-F_n 106
2. Some immediate implications of Eq. (1.1) 106
3. Some more identities in an S-F_n 108
4. Affine motion in an S-F_n (contd.) 109
5. Projectively symmetric Finsler spaces 109
6. Possibilities for a S-F_n to become projectively symmetric 111
   - 6.1 Alternate form of Eq. (5.5) 112
7. Bianchi identities in a PS-F_n 113
8. Some more identities in PS-F_n involving Lie derivation 114
9. A decomposable PS-F_n 115
10. Affine motion in a PS-F_n 117

8. RECURRENT FINSLER SPACES **119**

1. Introduction 119
2. HR-F_n with non-zero scalar curvature 120
   - 2.1 Space of constant Riemannian curvature 122
   - 2.2 An isotropic Finsler space F_n ($n > 2$) 122
   - 2.3 WR-F_n ($n > 2$) 123
3. HR-F_n with special reference to Lie derivation 124
   - 3.1 λ_m a gradient vector 126
   - 3.2 Lie invariance of curvature tensor 127
   - 3.3 $\pounds \lambda_i$ a parallel vector-field 128
4. H^i_{jk} -recurrent space 129
5. H^i_j -recurrent space F_n 130
6. HR-F_n with infinitesimal transformations of special form 131
   - 6.1 Special concircular vector field 131
   - 6.2 A relation for the tensor H^i_{jk} 132
   - 6.3 Special c.i.t.'s in a recurrent non-Riemannian space 133
   - 6.4 Contra infinitesimal transformations in HR-F_n 134

6.5 Recurrent vector-field 135
7. Affine motions in an HR-F_n 135
8. Condition for HR-F_n to become AHR-F_n 137
9. Recurrent affine motion in HR-F_n 139
9.1 Case of Eq. (9.7 140
10. Integrability conditions of Eq. (9.13) 143
10.1 Particular case 143
11. Some more characteristics of the function σ 144
12. Implications of Eq. (9.8) in an SHR-F_n 146

9. PROJECTIVE MOTIONS IN RECURRENT FINSLER SPACES 147

1. Introduction 147
2. PHR-F_n 148
3. Projective motions of special types in HR-F_n 150
3.1 Parallel vector field 150
3.2 Special c.i.t.'s in a recurrent non-Riemannian space A_n* 150
3.3 Special concircular projective motions in HR-F_n 151
3.4 Contra or concurrent projective motions in HR-F_n 152
3.5 Recurrent projective motion in HR-F_n 154
4. Some more implications of a recurrent projective motion in an HR-F_n 157
4.1 Gradient vector-field ϕ_j 158

10. GROUPS OF TRANSFORMATIONS IN FINSLERIAN SPACES 159

1. Introduction 159
2. Motions 159
3. Affine motions 159
4. Projective motions 161
5. Conformal transformations 163
6. Summary of groups of transformations in different Finslerian spaces 163

11. ON PROJECTIVELY FLAT FINSLERIAN SPACES 167

1. Introduction 167
2. Projectively flat F_n 167
3. Projectively flat symmetric F_n 173
4. A projectively flat HR-F_n 174
5. Some more properties of the functions P and λ_j in a projectively flat HR-F_n 179
6. Normal projective curvature tensor in a projectively flat HR-F_n 184

12. ON FINSLER SPACES WITH CONCIRCULAR TRANSFORMATIONS 187

1. Introduction 187
2. F_n with a concircular vector field 187
3. Flat manifolds admitting a c.i.t. 189
4. Isotropic Finsler space with a concircular vector field 191
5. F_n with a constant sectional curvature 193
6. Symmetric F_n with a concircular vector field 195

13. ON FINSLER SPACES WITH CONCIRCULAR TRANSFORMATIONS II 199

1. Introduction 199
2. Ricci-symmetric F_n with a c.i.t. 199
3. HR-F_n with a c.i.t. 203

14. AN AXIOMATIC APPROACH TO TENSORS 209

1. Introduction 209
2. Vector space. Contravariant vectors 209
3. Dual space. Covariant vectors 212
4. Tensor product. Tensors 213
5. Various types of tensors 215

15. PHYSICAL FIELD THEORIES 219

1. Introduction 219
2. Finslerian physics 220
3. Mechanics of open systems 222
4. Thermodynamic Finsler spaces 223
